

waterMAPs

Securing Victoria's water supplies

To help secure the State's water supplies, the Victorian Government is asking everyone to continue to play their part in conserving this precious resource.

Under the Water Act 1989 and Water Industry Act 1993, major water users are required to improve their water efficiency through the implementation of their own water Management Action Plan (waterMAP). All waterMAPs must be submitted to the relevant local water corporation.

Our Water Our Future

A Victorian
Government
initiative

Support tools to help develop your waterMAP

Local water corporations and peak industry bodies may be able to help you to complete your waterMAP through government or water corporation-funded assistance, site audits, or training.

For more information on how to gain assistance, please contact your local water corporation.

How do waterMAPs relate to the proposed Environment and Resource Efficiency Plans?

In 2008, Victoria's major industrial and commercial consumers of energy and water will be required to prepare an Environment and Resource Efficiency Plan (EREP) under the Environment Protection (Amendment) Act 2006.

Some major customers with a waterMAP for a site may need an EREP and be required to register with EPA Victoria. They will be required to submit their waterMAP and provide annual reports on the implementation and outcomes of their waterMAP. The EPA and DSE will further align the two programs to avoid any duplication of processes.

Water corporations will work with customers and the EPA to develop a waterMAP that meets the requirements of the EREP program.

If you think the site you operate will require an EREP, please contact your local water corporation.

Contacts

For further information on the EREP program please contact EPA Victoria directly.
